Version with markings to show changes made

In the specification:

The title beginning at page 1, line 1, has been amended as follows:

MEDICAMENTS CONTAINING [PANTHOTHENIC] PANTOTHENIC ACID

Paragraph beginning at page 2, line 20, has been amended as follows:

"An effective amount" refers to an amount of pantothenic acid or its derivative which confers a therapeutic effect on the treated subject. The therapeutic effect may be objective (i.e., measurable by some test or marker) or subjective (i.e., subject gives an indication of or feels an effect). A typical dose is about 2 mls of an aqueous solution of about 500 mg of the acid salt. The medicament is injected directly into the site of the inflamed joint. A [programme] program of injections is generally desirable in which dosages similar to that indicated above are given at intervals of a few days to about one week. Reduced inflammation and increased freedom of movement is usually noticeable after about a week from the initial injection.

In the claims:

Claims 1-9 have been cancelled.
